

OPEN, BAIT & PLACE

PT-206GN / Plastic Multi-Catch Mouse Trap / Read both pages before use.

CAUTION: Wear gloves for servicing. Keep hands away from entry openings and follow local catch-management rules.

01 OPEN & INSPECT

Hinged lid and entry assemblies

Place the empty trap on a stable surface. Release the centre-front latch and lift the full-width hinged lid. Check the body, lid and both metal entry assemblies for damage or obstruction.

02 ADD BAIT

Interior floor and two entry assemblies

Place a small amount of food bait on the flat interior floor, clear of both metal entry assemblies. Keep bait and debris out of the entry passages. Do not force or bend the metal parts.

03 CLOSE THE LID

Closed lid and secured front edge

Lower the lid and engage the centre-front latch. Check that the lid is secure and both short-end openings are clear. Do not use the trap if the lid will not close securely or an entry assembly is damaged.

04 PLACE ON A RUNWAY

Keep the short-end openings clear

Place on a level, dry floor with the long side close and parallel to a wall or confirmed mouse runway. Keep both short-end openings clear. Keep the trap away from children, pets and non-target animals.

Use for mice only. Plan regular checks and prompt servicing before placement. Never place the trap where it can be flooded or disturbed.

CHECK, SERVICE & REUSE

PT-206GN / Plastic Multi-Catch Mouse Trap / Read both pages before use.

CAUTION: Wear gloves for servicing. Keep hands away from entry openings and follow local catch-management rules.

05 CHECK FREQUENTLY

Inspect with the lid closed

Inspect through the translucent body at least daily and more often when conditions require. Service promptly when occupied. Keep the lid closed until you are ready to service the trap. Do not leave trapped animals unattended.

06 SERVICE THE CATCH

Full-lid access for servicing

Wear gloves and keep hands away from openings. Keep the lid secured while carrying the trap. Manage catches under local pest-control and animal-welfare requirements. Where release is permitted, open the full lid at the appropriate location and step back.

07 CLEAN & DRY

Empty interior and entry components

Once empty, remove contamination with a suitable disinfectant and follow its label contact time. Wipe the interior without bending the metal assemblies. Do not dry-sweep or vacuum droppings. Let the trap dry completely.

08 CHECK BEFORE REUSE

Ready for reuse: dry, closed and clear

Inspect the dry body, latch and both entry assemblies. Remove debris from the passages, replenish bait if needed and secure the lid. Do not reuse damaged equipment. Clean or discard gloves as appropriate, then wash hands.

Hygiene reference: CDC, How to Clean Up After Rodents (accessed September 2026). Follow the disinfectant label and local disposal requirements.
